*Non preferred Atypical Antipsychotics will be approved after a 2-week trial of ONE preferred Atypical Antipsychotic at an appropriate dose. If Invega[®] is selected as non preferred, approval will be granted if one of the following is true:

- Trial and failure of risperidone; OR
- Patient has hepatic impairment evident by elevated liver enzymes or a diagnosis suggestive of hepatic impairment

**For a diagnosis not specifically mentioned above, an atypical may be approved if the prescriber can provide documented clinical evidence (peer reviewed literature or multiple case studies) supporting the use of the requested medication for the requested indication.

Major Depressive Disorder (MDD) Criteria:

Atypical Antipsychotics will be approved for MDD as adjunct therapy ONLY. Atypicals will be approved if any ONE of the following is true:

- An adequate trial (4 weeks) of at least one agent in two of the following classes of antidepressants (unless contraindicated or intolerant to):
 - Selective Serotonins Reuptake Inhibitor (SSRIs)
 - Serotonin-Norepinephrine Reuptake Inhibitor (SNRIs)
 - New Generation Antidepressants
 - Tricyclic antidepressants (TCAs); OR
- A diagnosis of Major Depressive Disorder (MDD) with psychotic features.

Multiple Agents Criteria:

Patients who are on more than 2 Atypical Antipsychotic agents will require PA. Approval will be granted for the following reasons:

- A maximum of 2 months to allow patients to taper to dual therapy.
- Additional agents may be added to existing dual therapy after a 2-week trial at the maximum tolerated dose of each agent.

11 Injectable Antipsychotics

- 1. DMS to select preferred agent(s) based on economic evaluation. Generic formulations of first generation injectable antipsychotics should be preferred. Additionally, two unique second generation injectable antipsychotics, one of which should have a duration of action of 2 weeks or longer, should be preferred.
- 2. Require appropriate ICD-9 on all prescriptions for agents within this class.
- 3. Allow only two agents at a time unless switching agents due to therapeutic failure or the patient is refractory to dual therapy.
- 4. Allow continuation of therapy for non preferred single source branded products via a 90 day look back.
- 5. All products in the category should have a tier 1 copay regardless of preferred or non preferred status.
- 6. For any new chemical entity in the Injectable Antipsychotics class, require a PA until reviewed by the P&T Advisory Committee.

*Non preferred Injectable Antipsychotics will be approved after a 2-week trial of ONE preferred Antipsychotic (oral or parenteral) at an appropriate dose. If Invega[®] SustennaTM is selected as non preferred, approval will be granted if one of the following is true:

- Trial and failure of risperidone; OR
- Patient has hepatic impairment evident by elevated liver enzymes or a diagnosis suggestive of hepatic impairment

**For a diagnosis not specifically mentioned above, an injectable antipsychotic may be approved if the prescriber can provide documented clinical evidence (peer reviewed literature or multiple case studies) supporting the use of the requested medication for the requested indication.

Multiple Therapy Criteria:

Patients who are on more than two Atypical Antipsychotic agents will require PA. Approval will be granted for the following reasons:

- A maximum of 2 months to allow patients to taper to dual therapy.
- Additional agents may be added to existing dual therapy after a 2-week trial at the maximum tolerated dose if each agent.
